WIDTH **1.06m / panel**

LENGTH **max. 10 meters**

WEIGHT **+- 130 - 150 g/m² or 3,8 – 4,5 oz/yd²**

DIGITAL WALLCOVERING REQUIREMENTS

PREPARATION OF THE WALLS

- The wall must be smooth, flat and dust free.
- A primer or fixative is recommended. This will reduce possible colour variations or stains.

WALLCOVERING INSTRUCTIONS

- Use a ready-made universal water-based wall adhesive (suitable for non woven wallcoverings). Apply this evenly on the wall with a paint roller.
- Apply the wallcovering to the wall and press it on gently. Please use a soft-haired, clean wallpaper brush.

MAIN CONSIDERATIONS

- Do not apply a thick layer of adhesive to the wall.
- Do not apply adhesive to the wallcovering itself.
- Ensure that no water touches the printed side, because this can cause possible ink runs.
- Digital wallcovering is not washable.
- Please consider the opening time and processing time of the adhesive product. Please read the user manual carefully.
- Provide adequate ventilation, humidity and moderate temperatures (15 to 20 degrees is ideal).
- It is not recommended to use a palette or spatula for pressing down.
